

Risk Analysis

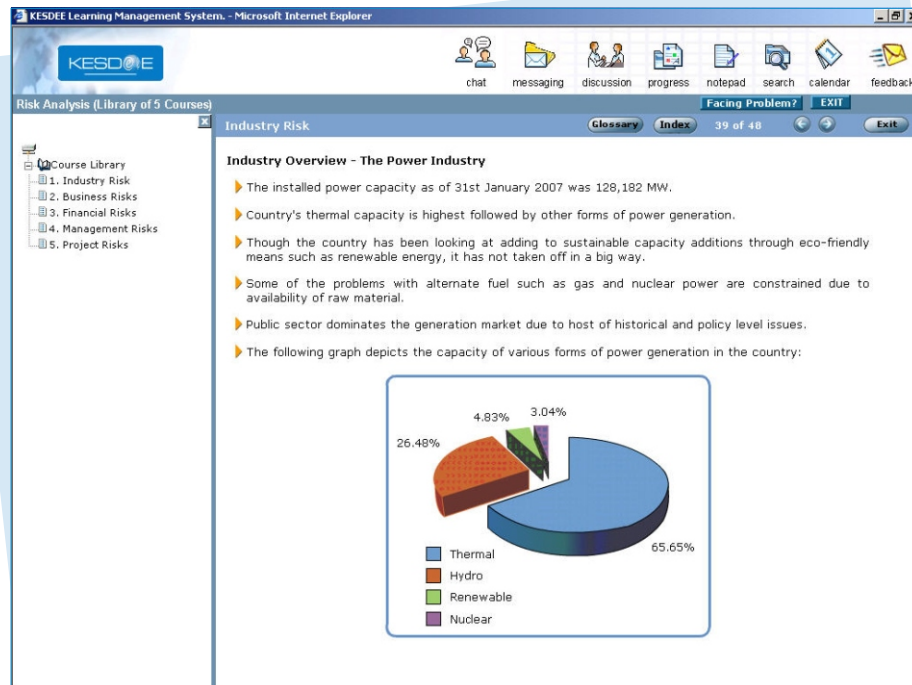

Overview

Risk analysis is the process of assessing the uncertainties associated with any situation. For example, if a person is taking a vehicle insurance policy, the insurance company is taking a risk of that person having an accident and a consequent need to pay the insurance.

Risk in the financial context defines the contours of a transaction and sets the expectation for both the buyer and seller. Analyzing risk is important both from a buyer's and seller's viewpoint in any transaction. The buyer is typically an institution/bank/individual who holds the bond/debenture. The seller is the entity, which is raising the money for its proposed projects.

Target Audience: The course is targeted at students of finance, and professionals in the field of risk management, project appraisal, finance, accounting, or business administration who want a deeper understanding of these concepts.

Course Level and Number of Courses
Basic to Intermediate
Library of 5 Courses

Library of 5 Courses

Individual course description

1. Industry Risk:

- Introduction to Industry Risk
- Different factors that affect each industry
